

Wochentag

Manchmal möchte man in Automationen auf den Wochentag setzen.

Um das zu vereinfachen hier der Templatesensor "sensor.weekday"

```
- platform: template
sensors:
  weekday:
    friendly_name: "Wochentag"
    value_template: >
      {% set weekday = int(as_timestamp(states('sensor.date_time_iso')) | timestamp_custom('%u')) %}
      {% if weekday == 7 -%}
        Sonntag
      {%- elif weekday == 6 -%}
        Samstag
      {%- elif weekday == 5 -%}
        Freitag
      {%- elif weekday == 4 -%}
        Donnerstag
      {%- elif weekday == 3 -%}
        Mittwoch
      {%- elif weekday == 2 -%}
        Dienstag
      {%- elif weekday == 1 -%}
        Montag
      {%- else -%}
        error
      {%- endif %}
```
